ELEVEN SKILLS · FREE · MIT LICENSE

The Day Trader skill. *Setup guide.*

aka Trader Skill v2

Eleven Claude skills that scan the charts, read the news, time the entry, plan the exit and replay the odds.

day-trader-skill Public

10,000 replays a trade

5,900 US stocks

github.com/Jakeschincariol/day-trader-skill

Educational only · Not investment advice · Not a SEBI-registered adviser

BEFORE ANYTHING ELSE

Read this *first.*

Not financial advice.

This is software that reads public data and does arithmetic. It cannot see the future. Most people who day trade lose money, and you can too.

No order without your yes

Only /trader-broker can lead to an order, and only after a risk PASS, your typed yes and your Allow once.

Paper trading by default

“paper”: true ships in the config. Stay on a paper account until you have watched it work.

A simulation, not a prediction

The Time Machine learns from the last 60 days. An earnings report or a halt can do what those days never did.

A stop is a plan, not a promise

In a fast market or across a gap, a stop can fill well past its price.

Free data, unofficial

Yahoo’s chart data can lag or change. Check anything that matters with your broker.

From me: I’m sharing an open-source tool, not trading advice. I’m not a SEBI-registered adviser. If you need advice, talk to a licensed professional.

Educational only · Not investment advice · Not a SEBI-registered adviser

BEFORE YOU START

What you *need.*

Claude Code

The terminal app, the desktop app or an IDE. The skills install and run here.

Python 3.8 or newer

Claude runs the tools with it. Nothing to pip install.
Check: `python3 --version`

Your name and email

The SEC tools (news filings, the analyst) ask who is reading. One line in your config.

A paper broker account

Optional, and only to place paper orders. Alpaca or Interactive Brokers. Page 11.

✓ No signup ✓ No API key ✓ No pip install

Built for US stocks.

It scans about 5,900 US-listed stocks and keeps New York time. The market opens at 9:30 AM there, which is 7 PM or 8 PM in India, depending on US daylight saving.

Educational only · Not investment advice · Not a SEBI-registered adviser

METHOD A · THE EASY WAY

Paste. Send. *Done.*

1 Paste the link — 2 Type install skill — 3 Ready

https://github.com/Jakeschincariol/day-trader-skill

install skill

11 skills installed. Try /trader-scanner

Wording varies. You want to see all eleven confirmed.

THEN TRY IT

CLAUDE CODE

```
/trader-scanner daily
```

What /trader-scanner hands back

- The US list, about **5,900 stocks**, from Nasdaq Trader
- Setups from daily closes: **20-day breakouts, bull flags, oversold bounces**
- Opening-range breakouts on 5-minute bars, while the market is open
- A **watchlist** that /trader-news and /trader-entry read next

Educational only · Not investment advice · Not a SEBI-registered adviser

METHODS B, C AND D

Prefer to do it *yourself?*

B As a plugin

inside Claude Code

CLAUDE CODE

```
/plugin marketplace add Jakeschincariol/day-trader-skill
/plugin install day-trader-skill@day-trader-skill
```

Plugin skills get a prefix: `/day-trader-skill:trader-scanner`

C Clone and copy

in your terminal

TERMINAL

```
mkdir -p ~/.claude/skills
git clone \
  https://github.com/Jakeschincariol/day-trader-skill.git
cp -r day-trader-skill/trader-* ~/.claude/skills/
```

You get the plain names, like `/trader-scanner`

D One project only

Copy the same `trader-*` folders into `.claude/skills/` inside your project instead.

Not sure? Use A.

It does the copying for you. No Claude Code at all? Paste any one `SKILL.md` at the top of a chat and it runs as a mode, without the Python tools.

Educational only · Not investment advice · Not a SEBI-registered adviser

STEP 2 · FIVE MINUTES

Set your *rules once.*

Every trade is checked against one file in your project, `trader/config.json`

FASTEST Let Claude ask you

CLAUDE CODE

```
/trader-budget set my rules
```

BY HAND Copy the example

TERMINAL

```
mkdir -p trader
cp ~/.claude/skills/trader-budget/config.example.json \
  trader/config.json
```

THE EXAMPLE VALUES. SET YOUR OWN.

Budget — `budget` — $5,000
Only money you can afford to lose

Max loss a trade — `max_loss_per_trade_usd` — $50
Decides how many shares

Daily loss limit — `max_daily_loss_usd` — $150
No new trades after it

Trades a day — `max_trades_per_day` — 3
Then it blocks entries

Entry window — `no_entries_*` — 09:45–15:30
New York time

Flat by — `flat_by` — 15:55
Out before the close

Paper trading — `paper` — true
Keep it on

Options, margin, short — `allow_*` — off
Off unless you turn them on

Plus `"sec_user_agent": "Your Name you@example.com"` for the SEC tools.

Educational only · Not investment advice · Not a SEBI-registered adviser

THE ELEVEN · 1 OF 2

One job *each.*

/trader-scanner

Chart Scanner

Scans thousands of US charts for setups: opening-range breakouts, flags, oversold bounces.

TRY `/trader-scanner orb --at 10:15`

/trader-news

News Monitor

Headlines and 8-K filings for every stock you watch, newest first, tagged by what moves it.

TRY `/trader-news TSLA`

/trader-entry

Entry Timer

Watches a setup bar by bar. Calls the entry on the first bar that closes above the range.

TRY `/trader-entry TSLA --setup orb`

/trader-exit

Exit Planner

Sets your stop and your target before you enter, and refuses a plan that makes no sense.

TRY `/trader-exit --stop or-mid --target 1R`

/trader-timemachine

Time Machine

Replays the rest of the day 10,000 times, plus every past day the same setup fired.

TRY `/trader-timemachine TSLA`

/trader-budget

Budget Manager

Sizes the trade to your max loss and writes one bracket order: entry, stop, target.

TRY `/trader-budget I only want to risk $50 a trade`

Educational only · Not investment advice · Not a SEBI-registered adviser

THE ELEVEN · 2 OF 2

And the *guards.*

/trader-risk

Risk Manager

Checks every order against your limits. PASS or BLOCK, with the reason.

TRY `/trader-risk check my order`

/trader-broker

Order Executor

Shows the ticket in plain words. Sends it only after your yes. Paper by default.

TRY `/trader-broker set up paper trading`

/trader-alerts

Price Alerts

Rings once on your stop, your target, the opening bell and your flat-by time.

TRY `/trader-alerts TSLA 370`

/trader-analyst

Earnings Analyst

Reads earnings straight from SEC filings and sums up what changed.

TRY `/trader-analyst TSLA`

/trader-pelosi

Pelosi Tracker

Reads Congress's public stock-trade filings the minute they are posted.

TRY `/trader-pelosi pelosi`

Each one reads what the last one wrote

Everything lands in a `trader/` folder in your project: the watchlist, the plan, the order, the verdicts. You talk to Claude. Claude runs the Python.

Educational only · Not investment advice · Not a SEBI-registered adviser

THE REEL'S EXAMPLE · REAL DATA

One trade, *end to end.*

TSLA, Monday October 19 2026. Every number is from the repo's own example.

1 **/trader-scanner** 10:15 AM

42 of 231 charts had closed above their opening range. TSLA's: 354.47 to 362.18.

2 **/trader-news** 8:04 AM

"Ahead of Earnings." Tesla reports this week, so a day trade is out before the report.

3 **/trader-entry** 10:15 AM

Triggered: the first 5-minute close above the range, 364.18.

4 **/trader-exit** the plan

Stop **358.32**, the range midpoint. Target **370.04**, one times the risk. Flat by 3:55 PM.

5 **/trader-timemachine** 10,000 replays

Plus 59 real sessions. Verdict: close to a coin flip.

6 **/trader-budget** 8 shares

$50 max loss ÷ 5.86 risk a share. Loss at the stop: $46.88.

7 **/trader-risk** PASS

Max loss, daily limit, trades a day, reward to risk, entry window.

8 **/trader-broker** your yes

Shows the ticket. You type yes. Claude's Allow once card asks again. Paper account.

Then /trader-alerts watches it

It rings on the stop, the target and at 3:55 PM, to close whatever is still open.

Educational only · Not investment advice · Not a SEBI-registered adviser

THE CRAZIEST ONE

The Time *Machine.*

Before you risk a dollar, it replays the rest of the day 10,000 times from the stock's own 5-minute bars.

CLAUDE CODE

```
/trader-timemachine TSLA
```

10,000 replays

TSLA · Oct 19 · seed 19

Target first	29.4%
Stop first	25.5%
Still open at the close	45.1%

Same rule, 59 real sessions

It fired 33 times.

13 hit the target · 15 hit the stop · 5 neither

ITS VERDICT *close to a coin flip.*

A simulation, not a prediction. The future can do things those 60 days never did. Treat the odds as a reality check, never as a promise.

Educational only · Not investment advice · Not a SEBI-registered adviser

OPTIONAL · PAPER FIRST

Connect a *broker.*

1. **Risk PASS**
   for this exact order
2. **Your yes**
   typed in the chat
3. **Allow once**
   on Claude's own card

No yes, no order. Every order, every time.

1 Make paper API keys

In the Alpaca dashboard. Paper keys are separate from live keys.

2 Install uv

It gives you `uvx`, which runs Alpaca's server. From docs.astral.sh/uv

3 Add the Alpaca server

Claude Desktop › Settings › Developer › Edit Config. Paste the block from `claude_desktop_config.example.json` and type your keys into that file.

4 Restart, then lock it

Customize › Connectors › alpaca. Set `place_stock_order` to **Needs approval**. Never Always allow.

Keys never go in the chat.

Pasted one by mistake? Delete the message and make new keys. On Interactive Brokers, add its connector from Customize › Connectors and approve orders inside IBKR too.

Educational only · Not investment advice · Not a SEBI-registered adviser

IF IT BREAKS

Quick *fixes.*

/trader-scanner is not found

Installed as a plugin? It's `/day-trader-skill:trader-scanner`. Otherwise reopen Claude Code, then run

```
ls ~/.claude/skills | grep trader-
```

python3: command not found

Install Python 3.8 or newer from python.org. The tools need nothing else.

The SEC tools ask who you are

Add your name and email as `sec_user_agent` in `trader/config.json` or the `SEC_USER_AGENT` variable.

Prices look late, or a scan stops

Yahoo's chart data is free and unofficial. It can lag or rate-limit you. Wait, retry, and trust your broker's price.

My broker still wants $25,000

FINRA dropped the day-trader minimum on June 4 2026, but brokers can phase it in until October 2027. Set

```
"pdt_guard": true
```

Update to the latest

Paste the link again and ask Claude to update. Or `git pull` in your clone and copy the folders again.
